**FILON®****Re: Request for information relating to Transition Reviews TD0008 and TS0009**

Following the Trade Remedies Authority's response for additional information; our interpretation is to compare the products within each of the product groups listed.

We do not purchase or use any of the products within groups A and B.

In group C, we only purchase chopped strand mats with powder binder (MCSP) and continuous filament mats with powder binder (MCFP). These two products are very similar in their properties and appearance. We have used both in the past and found no noticeable differences in their mechanical properties. However, on the last costs we received, MCFP was 25-50% more expensive than MCSP. For this reason, the vast majority of our usage is of MCSP, and we only use MCFP if there are supply issues with MCSP.

If you require any further information, please let us know.

Kind regards,

Filon Products Ltd
